MAIN PROJECT

TITLE - PREDICTION OF HEART DISEASE USING CNN ALGORITHM

DESCRIPTION - Convolutional Neural Network (CNN) algorithms, my developed predictive model demonstrates remarkable accuracy in identifying and classifying various types of heart diseases. By employing machine learning techniques, the model excels in discerning intricate patterns within medical data, contributing to enhanced diagnostic precision. This innovative approach holds promise for early detection and personalized intervention, showcasing the potential of advanced technology in revolutionizing cardiovascular healthcare.

MINI PROJECT

TITLE - DETECTION AND PREVENTION BLACKHOLE ATTACK IN MANET

DESCRIPTION - Threat of a Black hole attack in Mobile Ad Hoc Networks (MANETs). In this type of routing attack, an attacker node deceitfully responds to Route Request (RREQs) by impersonating a neighbor of the destination node, aiming to intercept data. Through simulations in NS-2, the proposed DPS mechanism demonstrates significant efficacy in reducing the packet drop ratio, accompanied by minimal false positives.

INTERNSHIP DETAILS

- Attended one month internship on “**Cyber Security**” organized by National Small Industries Corporation, Chennai sponsored by “Government of Tamil Nadu” from 19.07.2022 to 19.08.2022.
